

## [Jan-2023 PL-500 Questions - Truly Beneficial For Your Microsoft Exam [Q18-Q36]

### [Jan-2023 PL-500 Questions - Truly Beneficial For Your Microsoft Exam Download Microsoft PL-500 Sample Questions

What should I know before taking the Microsoft PL-500 Exam?

Microsoft is the leading platform and productivity company for the mobile-first, cloud-first world. Their mission is to empower every person and every organization on the planet to achieve more.

The exam is designed for experienced IT professionals who have a minimum of two years of experience in developing automation solutions with Microsoft Power BI RPA Developer, or equivalent knowledge and skills.

The exam covers all the objectives of the ?Microsoft PL-500: Microsoft Power BI RPA Developer? course. The course will help you understand how to develop RPA solutions using Microsoft Power BI RPA Developer using visual programming tools and wizards. You will learn about the four main components that make up an RPA application: workflow, apps, code and data connectivity source. You will also learn about how to create connections between different systems using different types of connectors (OData, REST API). In addition, you will learn about advanced topics such as security settings for your RPA applications and how to monitor your application for performance issues. **Microsoft PL-500 exam dumps** are excellent way to enhance you skills.

Schedule exam **Languages:** English

**Retirement date:** none

This exam measures your ability to accomplish the following technical tasks: design solutions; develop solutions; and deploy and

manage solutions.

### Why is it that important to be certified in the Microsoft PL-500 Exam?

Microsoft Power Automate RPA Developer certification exam is a very important exam for professionals who want to get into the field of business process automation. The Microsoft certification program has been designed for people who are interested in advancing their careers by demonstrating technical expertise and real-world skills. This exam is designed to validate your skills and knowledge of using Microsoft Power Platform, which includes infrastructure components such as Azure, SQL Server, Cosmos DB, and more.

Why is it that important ? The importance of this exam lies in the fact that it will help you become a certified expert in automating business processes with Microsoft Power Platform.

This certification will provide you with an opportunity to demonstrate your expertise in designing and implementing high-quality solutions based on Microsoft's cloud platforms and services. **Microsoft PL-500 exam dumps** are the way to get your dreamed certification.

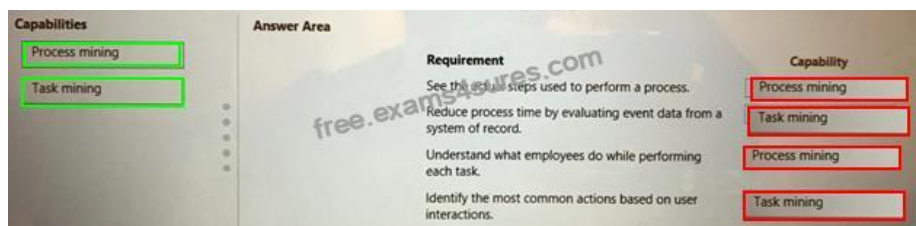

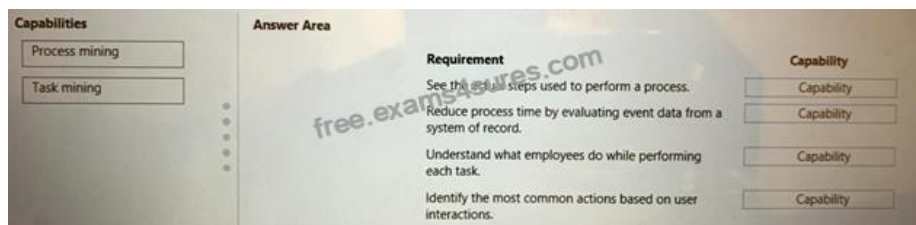

This exam will help you develop automated solutions for various industries such as retail, healthcare, financial services, manufacturing, transportation & logistics, etc., using Microsoft Power Platform.

**NO.18** A user is evaluating the capabilities of both process mining and task mining.

You need to determine when you should use process mining or task mining.

Which Process advisor capability should you use? To answer, drag the appropriate capabilities to the correct requirements. Each capability may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

**NO.19** You need to configure the solution for the ERPDataOperations flow.

Which configuration values should you use? To answer, select the appropriate options in the answer area, NOTE: Each correct selection is worth one point.

**Answer Area**

**Configuration setting**

Type of trigger to use

- When a new email arrives
- When a new event is created
- When a new row is created or modified
- When a new item is created or modified

Type of variables to use in the desktop flow to access credentials

- Set
- Input
- Output
- Compose

**Answer Area**

**Configuration setting**

Type of trigger to use

- When a new email arrives
- When a new event is created
- When a new row is created or modified
- When a new item is created or modified

Type of variables to use in the desktop flow to access credentials

- Set
- Input
- Output
- Compose

**NO.20** You are developing automation solutions for a company.

You need to select the components to use for each scenario. You must minimize development efforts. Which methods should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

## Answer Area

### Scenario

Query items from a SharePoint list.

Share methods from a third-party REST API with an organization.

Call a Microsoft Graph API endpoint using application permissions.

**NO.21** You are developing an automation solution for a bank. The solution will use a cloud flow and a desktop flow. The cloud flow retrieves sensitive information from Azure Key Vault and must pass the information to the desktop flow.

You configure a Get secret action as shown in the Get secret exhibit. (Click the Get Secret tab.)

You configure the desktop flow as shown in the Desktop flow exhibit. (Click the Desktop flow tab.)

You need to ensure that no one can preview sensitive information by viewing the cloud flow or desktop flow run details.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

**Answer Area**

Statement
The Get Secret action is configured to protect sensitive data in the cloud flow.
The desktop flow is configured to protect account login and password data.
Data extracted by the desktop flow is visible to use

## Answer Area

### Statement

The Get Secret action is configured to protect sensitive data in the cloud flow.

The desktop flow is configured to protect account login and password data.

Data extracted by the desktop flow is visible to user

**NO.22** You plan to use a cloud flow.

The flow must be contained within a solution.

You need to add the cloud flow to a solution.

Solution: Add an existing cloud flow from a managed solution to a new unmanaged solution.

Does the solution meet the goal?

\* Yes

\* No

**NO.23** You are developing a cloud flow.

You write expressions for the following JSON object. (Line numbers are included for reference only.)

```
01 {  
02   "customerNumber": 10001,  
03   "customerPhones": [  
04     "011-2345213",  
05     "0114456129"  
06   ]  
07 }
```

The flow parses JSON data by using the following schema;

```
09 {
10   "type": "object",
11   "properties": {
12     "customerName": {
13       "type": [
14         "string",
15         "null"
16       ]
17     },
18     "customerNumber": {
19       "type": "integer"
20     },
21     "customerPhones": {
22       "type": "array",
23       "minItems": 1,
24       "items": {
25         "type": "string"
26       }
27     }
28   }
29 }
```

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

### Answer Area

#### Statements

The expression `empty(body('Parse_JSON')['customerName'])` returns true.

The expression `concat(body('Parse_JSON').customerName, ': ', body('Parse_JSON').customerNumber)` returns 10091.

The expression `equals(body('Parse_JSON')?.customerPhones[2], '')` returns true.

The expression `int(body('Parse_JSON')?['customerPhones']?[1])` returns 114456129.

## Answer Area

### Statements

The expression `empty(body('Parse_JSON')['customerName'])` returns `true`.

The expression `concat(body('Parse_JSON').customerName, ': ', body('Parse_JSON').customerNumber)` returns `10091`.

The expression `equals(body('Parse_JSON')['customerPhones'][2], '')` returns `true`.

The expression `int(body('Parse_JSON')['customerPhones'][1])` returns `114456129`.

**NO.24** You need to design automation solutions for a company.

What should you implement? To answer, select the appropriate configuration in the answer area a.

NOTE: Each correct selection is worth one point.

## Answer Area

### Scenario

Sign into a web application that does not have an API and download a CSV file.

Access a CSV file from a local drive.

Send an email that includes a CSV file attachment.

**Answer Area**

**Scenario**  
Sign into a web application that does not have an API and download a CSV file.

Access a CSV file from a local drive.

Send an email that includes a CSV file attachment.

**NO.25** You are developing automation solutions for a company.

You need to use Microsoft Office scripts in a cloud flow to calculate the number of business days between two dates.

Which three actions should you perform in sequence?

To order, answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Actions**

- In the Excel desktop app, navigate to the Automate tab.
- Create and save a script.
- Add and configure a Run script action.
- Add a Compose action and use an expression.
- In Microsoft Excel on the web, navigate to the Automate tab.

**Answer area**

Navigation arrows: right arrow (top), left arrow (bottom)

**Answer Area**

- Add and configure a Run script action.
- Create and save a script.
- In the Excel desktop app, navigate to the Automate tab.

1 &#8211; Add and configure a Run script action.

2 &#8211; Create and save a script.

3 &#8211; In the Excel desktop app, navigate to the Automate tab.

**NO.26** You are developing automation solutions for a company.

You need to select the appropriate error handling action for the following scenarios. Which actions should you use? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

**Answer Area**

Scenario	Options
A desktop flow with multiple actions tries to launch Microsoft Excel with a blank workbook. The process fails.	<input type="checkbox"/> Configure run after only. <input type="checkbox"/> Handle the error within the action on failure. <input type="checkbox"/> Handle the error within the On block error handling.
A desktop flow with multiple actions tries to sign into a website by using the Chrome browser. The process occasionally fails.	<input type="checkbox"/> Configure run after only. <input type="checkbox"/> Handle the error within the action on failure. <input type="checkbox"/> Handle the error within the On block error handling.
A cloud flow must update a Boolean variable when a specific action fails.	<input type="checkbox"/> On block error <input type="checkbox"/> Configure run after <input type="checkbox"/> Action-level error handling

**Answer Area**

**Scenario**

A desktop flow with multiple actions tries to launch Microsoft Excel with a blank workbook. The process fails.

A desktop flow with multiple actions tries to sign into a website by using the Chrome browser. The process occasionally fails.

A cloud flow must update a Boolean variable when a specific action fails.

Configure run after only.  
Handle the error within the action on  
Handle the error within the On block  
Handle the error within the On block

Configure run after only.  
Handle the error within the action on  
Handle the error within the On block  
Handle the error within the On block

On block error  
Configure run after  
Action-level error handling

**NO.27** A company publishes a list of contacts each day as an HTML table on a web page. The company has a customer relationship management (CRM) application that runs on employee desktop devices.

You need to implement an RPA solution that reads data from the HTML table and create records in the CRM application.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Actions**

Launch a new web browser instance.

Use the Get details of element on web page action to read data from the HTML table into a variable.

Use the Run application action to start the CRM application.

Use the Extract data from web page action to read data from the HTML table into a variable.

Use a dynamic selector to save data from the HTML table into a variable.

Use a For each loop to write data from the variable to the CRM application.

**Answer area**

free.exams4sures.com

**Answer Area**

Use the Get details of element on web page action to read data from the,,,

Use the Extract data from web page action to read data from the HML table into a variable.

Use a for each loop to write data from the variable to the CRM application.

Launch a new browser instance.

1 &#8211; Use the Get details of element on web page action to read data from the,,,

2 &#8211; Use the Extract data from web page action to read data from the HML table into a variable.

3 &#8211; Use a for each loop to write data from the variable to the CRM application.

4 &#8211; Launch a new browser instance.

**NO.28** You are developing automation solutions for a company.

You need to select the components to use for each scenario. You must minimize development efforts. Which methods should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer Area**

**Scenario**

Query items from a SharePoint list.

Share methods from a third-party REST API with an organization.

Call a Microsoft Graph API endpoint using application permissions.

**NO.29** You are creating a solution that will use a Choice field for approvals.

You need to ensure that other users can use the Choice field with their Microsoft Dataverse tables.

What should you use?

- \* Environment variable
- \* Local choice
- \* Global choice

**NO.30** You need to identify the cause for the SMSApp data entry issue. What is the root cause?

- \* The DLP policy that contains the desktop flow connector was deleted.
- \* The default policy group is set to Blocked.
- \* The desktop flow was not shared with the finance clerk.
- \* The scope of the DLP policy was changed to exclude the development environment
- \* The Power Automate Management connector is assigned to the Business category.

**NO.31** You need to identify the actions that PipelineManager1 can perform.

Which three actions can PipelineManager1 perform? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- \* Override the DLP policy.
- \* Modify or delete a flow.
- \* Modify the owner's connection credentials.
- \* View the run history.
- \* Set the cloud flow priority.
- \* Add or remove other owners.

**NO.32** You are developing a cloud flow.

The flow must be able to query several Azure endpoints and must use standard actions where possible.

You need to configure the flow.

Which actions should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

## Answer Area

### Requirement

Issue POST requests to the Microsoft Graph API by using application permissions.

HTTP  
HTTP with Azu  
Send an HTTP  
Office 365 gro

Issue GET requests to the Microsoft Graph API by using delegated permissions.

HTTP  
HTTP with Azu  
Send an HTTP

**NO.33** You are preparing to share a desktop flow. You need to share the flow with another user.

Which two methods can you use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- \* Share the desktop flow by using the Microsoft Power Platform admin center.
- \* Share the desktop flow by using the Power Automate portal. Grant the user permissions to access the flow.
- \* Export a solution that contains the desktop flow and provide the solution to the user.
- \* Create a managed solution that contains the desktop flow and share the solution with another user.

**NO.34** A company plans to implement AI models to perform business processes.

You need to determine whether to use prebuilt or custom AI models.

Which type of model should you use for each scenario? To answer, drag the appropriate model types to the correct scenarios. Each model may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

The screenshot shows a 'Model types' pane on the left with two buttons: 'Prebuilt' and 'Custom'. To the right is an 'Answer Area' with a 'Scenario' section containing four items: 'Extract information from a receipt.', 'Detect spam emails.', 'Identify the language used in a text document.', and 'Extract information from tax documents.' A watermark 'free.exams4sures.com' is visible across the right side.

This screenshot is identical to the one above, but the 'Prebuilt' and 'Custom' buttons in the 'Model types' pane are highlighted with green rectangular boxes, indicating they are the correct selections for the scenarios listed.

**NO.35** You are designing an automation that processes information from documents attached to emails.

You need to extract data from the attachments and insert the data into a custom Microsoft Dataverse table.

Which five actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer

The screenshot shows a list of actions under the heading 'Actions'. The actions are: 'Create a collection and add documents to the collection.', 'Create an object detection model.', 'Use the model in a desktop flow.', 'Create a custom form processing model.', 'Train and publish a model.', 'Add extracted data to the Microsoft Dataverse table.', and 'Use the model in a cloud flow.' A watermark 'free.exams4sures.com' is visible across the right side.

**Answer Area**

Create a custom from processing model.
Use the model in a desktop flow.
Train and publish a model.
Add extracted data,,,,
Create a collection and add ,,,,

1 &#8211; Create a custom from processing model.

2 &#8211; Use the model in a desktop flow.

3 &#8211; Train and publish a model.

4 &#8211; Add extracted data,,,,

5 &#8211; Create a collection and add ,,,,

**NO.36** You are developing a new release for an automation solution.

You need to use the right feature.

Which feature should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

## Answer Area

### Scenario

Upgrade a single cloud flow from a solution.

Release a new major version of a solution.

Synchronize solution components between development and production environments.

Overwrite a solution in a production environment.

## Answer Area

### Scenario

Upgrade a single cloud flow from a solution.

Release a new major version of a solution.

Synchronize solution components between development and production environments.

Overwrite a solution in a production environment.
