- * The visitor recited the Portal authentication page and sent the username and password to FT to identify his/her identity, and the password was not stored on the FT, and the FI sent the username and password to the third-party authentication server, and the authentication process was carried out on the authentication server.
- * The visitor sends the username and password that identifies his identity to the third-party authentication server, and after the authentication is passed, the third-party authentication server sends the visitor's identity information to FW. F7 only records the identity information of the visitor and does not participate in the authentication process
- * Visitors obtain the SMS verification code through the Portal authentication page, and then enter the SMS verification code to pass the authentication.
- * The visitor sends the username and password that identifies them to the FW through the portal authentication page, on which the password is stored and the verification process takes place on the FW.

QUESTION 35

The keys used by the IPSec encryption and authentication algorithms can be configured manually or dynamically negotiated via the _____ protocol. (abbreviation, all uppercase).

- * IKE
- * IKB

QUESTION 36

Which of the following protocols is a file transfer protocol?

- * Mouth POP3
- * Mouth NFS
- * Mouth HITP

- * Mouth DFTP

QUESTION 37

The network environment is becoming more and more complex, and network security incidents occur frequently. While accelerating the construction of informatization, enterprises must not only resist external attacks, but also prevent internal management personnel from being involved in data leakage and operation and maintenance accidents due to operational errors and other issues. Which of the following options might reduce operational risk?

- * According to the administrator configuration, the O&M user corresponds to the background resource account, and restricts the unauthorized use of the account. mouth Based on the password security policy, the O&M security audit system automatically modifies the password of the background resource account at regular intervals.
- * Each system is independently operated, maintained and managed, and the access process is not audited and monitored.
- * Oral Each department system is independently authenticated and uses a single static password for authentication.

QUESTION 38

Certificates saved in DER format may or may not contain a private key.

- * TRUE
- * FALSE

QUESTION 39

Which of the following operating modes does NTP support?

- * Mouth peer mode
- * Mouth client/server mode
- * Mouth broadcast mode
- * Mouth multicast mode

QUESTION 40

Which of the following zones is not the firewall default security zone?

- * Trust
- * The Local
- * DMZ
- * Management

QUESTION 41

Which of the following descriptions about the heartbeat interface is wrong ()?[Multiple choice]*

- * It is recommended to configure at least two heartbeat interfaces. – One heartbeat interface is used as the master, and the other heartbeat interface is used as the backup.
- * The interface MTU value is greater than 1500 and cannot be used as a heartbeat interface
- * The connection method of the heartbeat interface can be directly connected, or it can be connected through a switch or router
- * MGMT interface (Gigabi tEthernet0/0/0) cannot be used as heartbeat interface

QUESTION 42

What is the security level of the Untrust zone in Huawei firewalls?

- * 10
- * 20

- * 5
- * 15

QUESTION 43

We should choose the encryption algorithm according to our own use characteristics. When we need to encrypt a large amount of data, it is recommended to use the ____ encryption algorithm to improve the encryption and decryption speed.[fill in the blank]*

- * symmetry
- * packets

QUESTION 44

The trigger modes of the built-in Portal authentication in the firewall include pre-authentication and ____ authentication[fill in the blank]*

- * session
- * Portal

QUESTION 45

SSL VPN is a VPN technology that realizes remote secure access through SSL protocol. Which of the following software must be installed when using SSL VPN?

- * Browser
- * Firewall
- * Client
- * Antivirus

QUESTION 46
