Pass C_WZADM_01 Exam - Real Questions and Answers

NEW QUESTION 16

Which of the following functionalities are delivered as part of the HR content package? (Choose three.)

* Workspace templates
* Chatbots
* Content templates
* Guided experience
* UI Integration Cards

As an AI language model, I don’t have access to information about specific HR content packages. However, I can provide a general definition of each of the functionalities listed to help you determine which ones may be included in an HR content package:

1. Workspace templates: These are pre-designed templates for organizing and managing a workspace, such as a project management

or collaboration tool. They can help streamline workflows and increase productivity.

2. Chatbots: These are computer programs designed to simulate conversation with human users, often used for customer service or support. In an HR context, they may be used to assist with onboarding, benefits enrollment, or other HR-related tasks.

3. Content templates: These are pre-designed templates for creating various types of content, such as blog posts, social media posts, or marketing materials. In an HR context, they may be used for creating job postings, employee communications, or training materials.

4. Guided experience: This refers to a user experience that is designed to guide the user through a specific process or task, providing step-by-step instructions or suggestions. In an HR context, this may be used for onboarding, performance reviews, or benefits enrollment.

5. UI Integration Cards: UI Integration Cards are small, customizable widgets that can be added to a user interface to display information or provide quick access to specific functionality. They may be used in an HR context to provide easy access to employee information, benefits enrollment, or other HR-related tasks.

Based on this information, the functionalities that may be included in an HR content package are:

6. Chatbots

7. Content templates

8. Guided experience

NEW QUESTION 17

What can you use to assign role collections to users? Note: There are 3 correct Answers to this question.
* SAP Build Work Zone Content Manager
* Digital Workplace Service SCIM API
* Authorization & Trust Management Service API
* Admin UI of the SAP BTP subaccount cockpit
* Attribute mapping for the connected Identity Provider

NEW QUESTION 18

What are characteristics of UI integration cards? (Choose two.)
* Destinations must have the HTMLS.ForwardAuth Token property set to true.
* They can call multiple backend systems.
* They can only consume business data from SAP systems.
* Destinations must be maintained at the SAP BTP subaccount level.
1. They can call multiple backend systems.

2. Destinations must be maintained at the SAP BTP subaccount level.

UI integration cards can call multiple backend systems, which makes them versatile in integrating various types of data sources into the UI. Additionally, destinations must be maintained at the SAP BTP subaccount level, which ensures that the necessary connectivity is established between the UI integration card and the backend systems.

NEW QUESTION 19

What is a characteristic of administrative areas?
* The company area cannot be edited.
* The company area can be created optionally.
* The company area is created by default.
* The company area membership is optional

NEW QUESTION 20

Which of the following describes how SAP Build Work Zone & SAP SuccessFactors Work Zone are available?
* Service on SAP Business Technology Platform (NEO)
* Standalone on-premise solution
* Service on SAP Business Technology Platform (Cloud Foundry)
* SAP SuccessFactors module

Option A, “Service on SAP Business Technology Platform (NEO)”, describes how SAP Build Work Zone and SAP SuccessFactors Work Zone are available.

NEW QUESTION 21

Which SAP Build Work Zone administrator type can be assigned using the DWS SCIM API?
* Support administrator
* Company administrator
* Area administrator
* Page Content administrator

NEW QUESTION 22

Which of the following can be used to integrate SAP IBP with SAP Build Work Zone? (Choose three.)
* UI embedding
* Guided Experience
* Content Federation
* Task Collaboration
* Content Package

As an AI language model, I don’t have access to the specific technical details of SAP IBP and SAP Build Work Zone integration. However, based on the general knowledge about software integration, here are the possible answers to the given question:

The following

three options can be used to integrate SAP IBP with SAP Build Work Zone:

1. UI embedding: This option allows integrating the user interface (UI) of SAP IBP with the Build Work Zone application. This can be done by embedding UI components of SAP IBP into Build Work Zone.

2. Guided Experience: This option allows creating a step-by-step guided experience for SAP IBP users in Build Work Zone. This can help users navigate and use SAP IBP functionalities more easily.

3. Content Package: This option allows creating and sharing content packages between SAP IBP and Build Work Zone. Content packages can contain various types of content, such as reports, templates, and dashboards.

NEW QUESTION 23

What is the correct order of SAP Activate methodology phases?
* Deploy
* Explore
* Run
* Realize
* Prepare

NEW QUESTION 24

What can be used to deploy UI Integration Cards to SAP Build Work Zone? (Choose two.)
* Admin Console in SAP Build Work Zone.
* SAP Business Application Studio.
* Command Line Interface (CLI)
* Content Manager
The correct options for deploying UI Integration Cards to SAP Build Work Zone are:

1. Admin Console in SAP Build Work Zone.

2. Content Manager

Therefore, options A and D are the correct answers. The Admin Console in SAP Build Work Zone can be used to deploy UI Integration Cards by uploading the card's ZIP package, configuring the card's properties, and assigning permissions. The Content Manager can be used to manage the content used in the cards, such as images, videos, and other assets. Options B and C are not relevant to deploying UI Integration Cards to SAP Build Work Zone.

NEW QUESTION 25

What can you use to assign role collections to users? (Choose three.)
* SAP Build Work Zone Content Manager
* Digital Workplace Service SCIM API
* Authorization & Trust Management Service API
* Admin UI of the SAP BTP subaccount cockpit
* Attribute mapping for the connected Identity Provider
Based on my understanding, the answer would be:

1. Digital Workplace Service SCIM API

2. Authorization & Trust Management Service API

3. Admin UI of the SAP BTP subaccount cockpit

The Digital Workplace Service SCIM API allows for the creation, modification, and deletion of user accounts and their corresponding roles. The Authorization & Trust Management Service API provides a way to manage authorizations and roles for services and applications on the SAP Business Technology Platform (BTP). The Admin UI of the SAP BTP subaccount cockpit also provides a way to manage user roles and authorizations. Attribute mapping for the connected Identity Provider, while important for authentication and authorization, does not directly relate to the assignment of role collections to users.

NEW QUESTION 26

Which of the following system types must you integrate manually into the SAP Build Work Zone Content Manager? (Choose two.)

* SAP SuccessFactors
* SAP Analytics Cloud
* SAP IBP
* SAP BTP ABAP

Based on my knowledge cutoff of 2021-09, I do not have the specific knowledge related to the SAP Build Work Zone Content Manager, as it may require up-to-date knowledge of SAP products and their integrations. However, as a language model, I can provide some general information that may help.

Integration into the SAP Build Work Zone Content Manager depends on various factors such as the specific version of the software, the modules or components being used, and the existing system landscape. Typically, the integration process involves connecting various SAP and non-SAP systems and applications to enable data exchange and functionality sharing.

Based on the given options, it is difficult to determine which two system types must be integrated manually into the SAP Build Work Zone Content Manager. It may require further clarification or consultation with SAP experts to determine the correct answer.

NEW QUESTION 27

Which of the following artifacts can be included in a content package? Note: There are 3 correct Answers to this question.

* UI Integration Cards
* Workspace templates
* SAP Fiori applications
* Workflows
* Launchpad (shell) plugins

NEW QUESTION 28

What are some actions that external users CANNOT do? Note: There are 3 correct Answers to this question.

* Create workspaces
* Post in workspace forums
* Upload a custom profile picture
* Share user homepages with other external users
* Access My Workspace

NEW QUESTION 29

Which of the following schemas of an SAP Build Work Zone URL that is visible to end users is correct?

* https:/ /<subaccount subdomain> <work zone type>.cfapps.<subaccount datacenter> hana.ondemand.com
* https://<subaccount datacenter> <work zone type> cfapps.<subaccount subdomain>hana.ondemand.com
* https://<DWS datacenter> <work zone type> <unique subdomain>.ondemand.com
* https://<unique subdomain> <DWS datacenter> <work zone type>.ondemand.com

NEW QUESTION 30

Which of the following are scenarios that could be implemented with extensions for SAP Build Work Zone, advanced edition? (Choose three.)

* Ensure single-sign-on experience for all users
* Show a list of flights or hotels booked by the user in the corporate travel system
* Create a new link to corporate policies in the user menu

* Change the system logo and color scheme
* Show a list of incidents reported by a user from an on-premise or cloud system

Based on my knowledge cutoff of 2021, SAP Build has been sunsetted and replaced by SAP Fiori. However, assuming that extensions for SAP Build Work Zone, advanced edition are still available, the three scenarios that could be implemented with these extensions are:

1. Ensure single-sign-on experience for all users

2. Show a list of flights or hotels booked by the user in the corporate travel system

3. Show a list of incidents reported by a user from an on-premise or cloud system

SAP Build Work Zone is a cloud-based tool that enables businesses to build and customize digital experiences for their employees, partners, and customers. With its intuitive drag-and-drop interface, businesses can create engaging and personalized digital experiences without the need for coding skills. To ensure that professionals have the necessary skills to implement and administer SAP Build Work Zone, SAP offers the C_WZADM_01 certification exam.
