Download Exam C_BW4H_211 Practice Test Questions with 100% Verified Answers Share Latest C_BW4H_211Test Practice Test Questions, Exam Dumps QUESTION 20

Which external hierarchy properties can be changed in the query definition? Note: There are 3 correct answers to this question.

- * Position of child nodes
- * Time dependency
- * Sort direction
- * Display text nodes
- * Expand to level

QUESTION 21

You want to set up the replication process for the SAP Landscape Transformation Replication Server. Which actions can you define for a specific table? Note: There are 2 correct answers to this question.

- * Apply mapping rules during the replication
- * Set the reading type and portion sizes
- * Change or enrich the table structure

- * Convert Unicode to non-Unicode
- * Apply customizing settings to the database redo logs.

QUESTION 22

For a BW query, you want to have the first month of the current quarter as a default value for an input-ready BW variable for the characteristic OCALMONTH. Which processing type do you use?

- * Customer Exit
- * Manual Input with offset value
- * Replacement Path
- * Manual Input with default value

QUESTION 23

The Database Explorer in the Web IDE for SAP HANA provides a data file import wizard to create a table in SAP HANA from a flat file. What are possible actions after the system suggests the target structure?

Note: There are 3 correct answers to this question.

- * Switch the table type between row store and column store.
- * Change the order of the fields in the target table.
- * Define sorting properties for a target table field.
- * Remove leading zeroes for a target table field.
- * Adjust the suggested data type of the target table fields.

QUESTION 24

What are the reasons for implementing CompositeProviders? Note: There are 2 correct answers to this question.

- * To store snapshots for reporting
- * To provide an interface for BW queries
- * To persist combined data for reporting
- * To provide a virtual data mart layer

QUESTION 25

What is the request handling default setting for error handling in a data transfer process (DTP) in SAP BW/4HANA?

- * Request is set to failed, error stack is written, and valid records are updated
- * Request is canceled, records are not tracked, and target is not updated
- * Request is set to success, error stack is written, and valid records are updated
- * Request is canceled, first incorrect record is tracked, and target is not updated.

QUESTION 26

Which recommendations should you follow to optimize BW query performance? Note: There are 3 correct answers to this question

- * Use fewer drill-down characteristics in the initial view
- * Use characteristic filters that overlap
- * Use exclude functions in the restricted key figures
- * Use mandatory characteristic value variables
- * Use include functions in the restricted key figures.
- * A. Use fewer drill-down characteristics in the initial view: This can improve the query performance by reducing the amount of data that needs to be transferred and displayed at the start of the query execution. The user can drill down to more details later if

needed1.

- * D. Use mandatory characteristic value variables: This can improve the query performance by restricting the data selection to a smaller set of values that are relevant for the user. The user can also change the variable values later if needed1.
- * E. Use include functions in the restricted key figures: This can improve the query performance by avoiding unnecessary calculations and aggregations that are done when using exclude functions. Include functions are also more efficient than selections or restricted key figures when filtering data1.

QUESTION 27

You want build a web-based dashboard with interactive visualizations using Javascript. Which SAP tool can you use to create this?

- * SAP BusinessObjects
- * Web Intelligence
- * SAP Analytics Cloud analytics designer
- * SAP Crystal Reports
- * SAP Smart Business Cockpits
- * SAP Analytics Cloud analytics designer: This tool can help you create web-based dashboards with interactive visualizations using Javascript. You can use the analytics designer to create custom applications that leverage the power of SAP Analytics Cloud models and APIs12.

QUESTION 28

Which features of an SAP BW/4HANA InfoObjet are intended to reduce the physical data volume? Note; There are 2 correct answers to this question.

- * Reference charateristic
- * Transitive attribute
- * Compounding charateristic
- * Enhanced master data update

QUESTION 29

Why should you run an SAP HANA delta merge? Note: There are 2 correct answers to this question.

- * To improve the read performance of InfoProviders

- * To move the most recent data from disk to memory
- * To decrease memory consumption
- * To combine the query cache from different executions

QUESTION 30

You want to add a Source System of type Big Data in SAP BW/4HANA. Which adapters can you use to reference the remote source system? Note: There are 2 correct answers to this question.

- * IQ (ODBC) adapter
- * SAP HANA Adapter
- * Spark SQL Adapter
- * SAP Vora ODBC adapter

QUESTION 31

You created a generic DataSource in SAP ERP. How can you enable your generic Data Source to be used as an ODP SAP DataSource in SAP BW/4HANA in case it is not available by default?

- * Add a subscription in SAP ERP using the program RODPS_REPL_TEST
- * Run the program RODPS_OS_EXPOSE in SAP ERP for the DataSource
- * Release the DataSource in SAP BW/4HANA for ODP
- * Generate the PSA table of the DataSource in SAP BW/4HANA

QUESTION 32

What are benefits of separating master data from transactional data in SAP BW/4HANA? Note: There are 3 correct answer to this question.

- * Allowing different data load frequency
- * Reducing the number of data transfer processes
- * Ensuring referential integrity on your transactional data
- * Providing language dependent master data texts.
- * Avoiding generation of SID values.

Separating master data from transactional data in SAP BW/4HANA has the following benefits:

It allows different data load frequency for master data and transactional data, which can improve the performance and flexibility of data loading processes. For example, master data can be loaded daily or weekly, while transactional data can be loaded hourly or near real-time.

It ensures referential integrity on your transactional data by using SID values that link the transactional data to the master data. This way, the transactional data can be consistent and accurate across different InfoProviders and queries.

It provides language dependent master data texts that can be displayed in different languages according to the user's preference. This way, the master data can be more user-friendly and understandable for different audiences.

QUESTION 33

How does SAP position SAP Data Warehouse Cloud in supporting business users?

- * Business users can create agile models from different sources.
- * Business users can allocate system resources without IT involvement.
- * Business users can generate SQL code that is pushed to SAP BW/4HANA
- * Business users can maintain process chains from SAP BW/4HANA dataflows.

QUESTION 34

Using SAP HANA as modeling focus, you want to combine data from different sources. Which techniques can you use? Note: There are 2 correct answers to this question.

- * BAPIs (Business Application Programming Interface)
- * Calculation views
- * AMDPs (ABAP Managed Database Procedures)
- * Stored procedures

QUESTION 35

Which recommendations should you follow to optimize BW query performance? Note: There are 3 correct answers to this question.

- * Use fewer drill-down characteristics in the initial view
- * Use mandatory characteristic value variables
- * Use exclude functions in the restricted key figures
- * Use characteristic filters that overlap
- * Use include functions in the restricted key figures

QUESTION 36

What can you leverage using the live data connections of SAP Analytics Cloud with SAP BW/4HANA?

Note: There are 2 correct answers to this question.

- * Process chain streaming functionality
- * BW data models for analysis
- * Existing authorization concepts
- * BW data models for planning scenarios

SAP C-BW4H-211 certification exam is designed to test the skills and knowledge of professionals who work with SAP BW/4HANA systems. C_BW4H_211 exam is intended for those who are responsible for reporting, modeling, and data acquisition within SAP systems, and it is aimed at helping professionals demonstrate their proficiency in these areas.
