

H13-821_V3.0 Free Study Guide! with New Update 415 Exam Questions [Q145-Q161]

H13-821_V3.0 Free Study Guide! with New Update 415 Exam Questions
Get up-to-date Real Exam Questions for H13-821_V3.0 UPDATED [2024]

NEW QUESTION 145

A smart park cloud needs to access a large number of video surveillance probes, receive data uploaded by various devices on the cloud device management platform, and remotely monitor the operating status of the devices. To achieve this goal, the most suitable product is IoT data analysis service.

- * True
- * False

NEW QUESTION 146

Which of the following descriptions about HUAWEI CLOUD container solutions are correct? (Multiple choice)

- * Non-intrusive traffic management can be realized through application service grid ASM
- * Realize call chain tracking through application operation and maintenance management AOM
- * Support cross-cloud unified cluster resource management through the multi-cloud container platform MCP
- * Implement elastic scaling of cross-cluster applications through elastic load balancing (ELB)

NEW QUESTION 147

A user wants to achieve cross-regional communication between VPCs. Which of the following services can help the user achieve the goal? (Multiple choice)

- * Peer-to-peer connection
- * Virtual Private Network
- * Cloud Dedicated Line
- * Cloud connection

NEW QUESTION 148

The implementation of cloud-native applications is usually based on the micro-service architecture. Which of the following descriptions about the underlying technology of the micro-service architecture is correct? (Multiple choice)

- * Non-intrusive service governance can be achieved through Istio
- * Agile infrastructure can be realized through unified scheduling of OpenStack resources
- * Continuous development and integration can be achieved through the microservice framework Spring Cloud
- * Containerized deployment can be realized through Kubernetes container orchestration and scheduling

NEW QUESTION 149

The cloud database instance provided by HUAWEI CLOUD supports multiple access methods. Which of the following access methods is not supported?

- * Intranet IP access
- * Public network IP access
- * VPN access
- * Cloud Dedicated Line Access

NEW QUESTION 150

When a user purchases an elastic cloud server, various virtualization software can be installed on the cloud server. Not only that, it also supports the creation of virtual machines in virtualization software to complete secondary virtualization and multiple virtualizations.

- * True
- * False

NEW QUESTION 151

The monolithic architecture is a service-oriented architecture, which has the characteristics of loose coupling, simple structure, easy deployment and upgrade, and communicates through the ESB bus.

- * True
- * False

NEW QUESTION 152

Cloud workloads are loads that run services on cloud resources, including virtual machines, elastic load balancing, containers, etc., which carry the core of enterprise business.

- * True
- * False

NEW QUESTION 153

The container uses cgroup technology to limit the use of CPU and memory. Reasonably setting the request and upper limit of container resources can effectively guarantee the resource usage quota of the container, avoid resource preemption and affect the stability of the operating environment, and do not affect container resources. Setting the upper limit of the quota can effectively improve the resource utilization of the node

- * True
- * False

NEW QUESTION 154

The expansion directions in the AKF expansion cube and their corresponding concerns are: the X-axis expansion focuses on the division of responsibilities in the application, such as data types, and the division of transaction execution types, the Y-axis expansion focuses on vertical data and service cloning, that is, "Add machines to solve problems"; Z-axis expansion focuses on service and data prioritization, such as sub-regional division.

- * True
- * False

NEW QUESTION 155

ROMA Connect supports integrated conversion between data with the same structure, but does not support integrated conversion between heterogeneous data.

- * True
- * False

NEW QUESTION 156

In the Serverless mode, the cloud platform is responsible for managing the startup, execution and usage of microservice functions, and users need to configure the computing resources, network resources, security resources, etc. required for scheduling function execution.

- * True
- * False

NEW QUESTION 157

ServiceStage, an application management and operation and maintenance platform, is a one-stop application management and operation and maintenance platform for enterprises. Which of the following descriptions about ServiceStage is wrong?

- * Support java, Go, PHP, Node.js, Python, Docker and other operating environments
- * Support the access and governance of special mainstream microservice frameworks, and cooperate with the microservice engine to realize service registration discovery, configuration management and service governance
- * Support web applications, microservice applications and general applications such as Apache ServiceComb, Spring Cloud, Dubbo, Mesher service grid
- * Support development to identify potential problems in the code in a timely and accurate manner: through intelligent technology, provide automatic defect repair capabilities to help development quickly repair code defects

NEW QUESTION 158

DataArts Studio (formerly DGC), the database governance center, is a one-stop governance and operation platform that provides data lifecycle management and intelligent data management capabilities for the digital operation demands of enterprises.

Which of the following describes DGC's core competencies? (Multiple choice)

- * Integration of multiple heterogeneous data sources
- * Data Quality Monitoring
- * Job Script Arrangement Development Scheduling
- * Data Model Development

NEW QUESTION 159

An enterprise plans to use HUAWEI CLOUD FunctionGraph to cooperate with other cloud services to build cloud-native web applications to improve business automation. In the following description of FunctionGraph, which items are correct? (Multiple choice)

- * Support Node.js, Java, Python, C# and other runtime languages
- * Unified plug-in support for development and debugging on cloud and off cloud
- * When users use it, they only need to write business function codes and set the running conditions, without configuring and managing infrastructure such as servers
- * Through the visual layout page, event triggers, functions and process controllers can be associated in a flow chart through connections

NEW QUESTION 160

An enterprise deploys new services in HUAWEI CLOUD through the cloud container instance service CCI. The operation and maintenance personnel MR Wang is going to connect the CCI instance to the application operation and maintenance management service AOM to facilitate subsequent viewing and retrieval of logs. Which of the following description of connecting CCI to AOM service is correct? (Multiple choice)

- * The log can be dumped to the AOM service by means of log dump
- * There is no limit to the number of log files, but the log storage space needs to be billed
- * You need to add log storage to the container when creating the load
- * Support `./log`, `./trace`, `./out` files under the log path

NEW QUESTION 161

The IoT edge service IoT Edge is the application of edge computing in the Internet of Things industry. Which of the following descriptions about the characteristics of IoT Edge are correct? (Multiple choice)

- * Edge-cloud collaboration: Unified deployment, operation and maintenance, and business management of edge nodes on the cloud, with business support running offline
- * Universal access: Multiple access methods support universal access of IoT devices (general protocol, plug-in extension, SDK extension)
- * Low latency: real-time processing and decision-making at the edge
- * Intelligent analysis: edge nodes directly analyze the collected data without uploading to the back-end server, and the response speed is faster
